# How we work?

## About QR-Solve

### Elite development Teams

- TELL US ABOUT YOUR BUSINESS NEEDS
- LET US PREPARE THE SCOPE WITH MVP
- WATCH YOUR PRODUCT GROWTH
- GET FEEDBACK FROM THE MARKET

You bring the vision. We bring the people who are talented, experienced and excited to begin. Our teams are cross-functional, self-organizing and self-sufficient agile units that consist of all required professions like solution architect, UI/UX, DevOps, frontend and backend developers, cloud experts, QA experts, etc.

Our team is very experienced in creating demanding software. For many years, we have learned how to work to ensure the highest possible efficiency and quality of solutions. Our knowledge in this area is divided into technical knowledge that allows us to choose the best technologies and tools for a given business problem, and mental knowledge that allows us to work in agile methodologies. In every project, we use our experience and gain new ones.

# How can IT be simpler?

We are an agile and modern organization consisting of cross-functional highly qualified teams focused on goals, quality and product reliability. We continuously help our customers around the world to build their businesses and transfer our know-how to their organizations. We use simple and transparent rules.

## Our approach

### Agility

We strongly believe that developing products in an incremental and evolutionary way, is the most efficient method. During the whole project you can adjust your product backlog based on new experiences after every sprint increment. Only with such an approach can you become a trendsetter in the market. That's why we work in Agile methodologies like Scrum or AgilePM.

### Transparency

Thanks to the regular product backlog refinements, we provide the most up-to-date estimates, to predict the final costs and planned release dates. Every sprint increment and agreed next steps for every sprint are documented. We use modern standards for documentation which is available online for stakeholders and other teams to improve knowledge propagation.

### Highly experienced team

Many years of experience and successful projects show us that only a highly experienced and qualified team can guarantee final success. Why? Because only such a team can stay focused on business needs. Therefore it can adjust all the development processes, just to achieve expected goals every particular sprint. The results are visible from the beginning. We are a cross-functional team consisting of Full stack and Frontend developers, Architects, DevOps, Scrum masters, etc.

### Modern and proven technology

Our approach is to match the best technology with the given business case, not the other way around. Therefore we track technology radars, and we know exactly which technologies can be used. Based on that knowledge our experts continuously improve their skills and our technology stack. Thanks to this we use the most advanced and reliable technologies, tools and approaches. We specialize in Cloud Solutions, DevOps and software. development areas.

## How to start

Share your business needs with us and we will take care of the rest. Let us convince you of our approach and the high quality of our service. This will probably change your thinking of modern software development. Don't wait, simply just contact us - it's absolutely free!

## Advantages we give you

- ✓ **Time-to-market.** We stay focused on business goals and at the first stage on the MVP scope.
- ✓ **Quality.** We are aware how product quality is important for your business. There is no compromise when it comes to quality.
- ✓ **Automatisation.** We save your time. We automatize everything including E2E tests, CI/CD, etc.
